SUMMARY

Frontend Software Engineer with over six years of experience and a strong foundation in Computer Science. I have successfully led projects that improved application performance, structure, and reduced downtime by migrating legacy AngularJS systems to modern Angular frameworks. Skilled in Angular, Ionic, TypeScript, and Tailwind, with experience in supporting technologies required to launch applications, including AWS services and CI/CD configuration.

I consistently deliver scalable, high-quality code and have implemented CI/CD pipelines and AWS integrations to ensure robust and reliable applications for global users.

EXPERIENCE

GasHub, ***Full Stack Engineer***
Jun 2025 - Present
• Developed a natural gas trading application with real-time matching between sellers and buyers, including instant notifications, leveraging Supabase as the backend.
• Delivered a functional prototype for market validation in under three weeks using React and AI agents.
• Refactored the codebase for maintainability and quality, and implemented comprehensive unit tests with Testing Library plus end-to-end tests using Playwright.
• Collaborated in refining requirements and validating business workflows to ensure product-market fit.

MyTime, ***Frontend Software Engineer***
Apr 2022 - Apr 2025
• Migrated a legacy AngularJS (CoffeeScript) payment system to a modern Angular/TypeScript stack, improving code reliability and enhancing maintainability. Implemented automated unit tests with Jest and Testing Library, achieving high test coverage and ensuring the system's stability post-migration.
• Delivered a seamless integration between legacy and modern systems, enabling uninterrupted operations during the transition phase.
• Rebuilt and optimized several core modules in the legacy POS system, significantly improving user experience and enabling a successful re-launch of the application. These optimizations not only enhanced performance but also reduced the effort required for future maintenance, making the system more scalable for future updates.
• Implemented the components, ensuring the support of W3C accessibility standards, so even visually impaired users could operate on our system.

Twenty20 Solutions, ***Frontend Software Engineer***
Jan 2022 - Mar 2022
• Architected a browser-based desktop environment using Angular, enabling dynamic interaction with modular "mini-applications" and ensuring long-term scalability through SOLID and Clean Architecture principles.
• Introduced Jest for unit testing and implemented CI/CD workflows with GitHub Actions, streamlining the development process and improving team velocity.
• Set up environment configurations and integrated linters, enforcing code quality standards and maintaining consistency across the development process.

The project was cut off due to the pandemic.

GreenAnt, ***Frontend Software Engineer***
Jan 2020 - Dec 2021
• Developed a front-end architecture of an electric energy data dashboard using Angular, creating reusable UI components and improving real-time data visualization.
• Led the migration from AngularJS to Angular, integrating both environments and implementing Webpack-based bundling, which enabled the gradual upgrade of legacy code while maintaining stability.
• Developed a PDF generation microservice with AWS Lambda and implemented CI/CD pipelines using GitLab CI, streamlining the deployment process and accelerating release cycles.
• Launched a mobile app using Ionic for invoice payment and data monitoring, significantly enhancing customer accessibility and providing a faster, more intuitive experience.

Universidade de Brasília, ***Frontend Software Developer***
Aug 2018 - Aug 2020

• Developed a mobile-first dashboard to simplify access to government data, ensuring clarity and accessibility for the general public.
• Focused on UX principles to enhance data discoverability and engagement.

Grupo Gera, ***Frontend Software Engineer***
Feb 2019 - Dec 2019
• Led the design and development of a dashboard for energy consumption analytics, empowering enterprise clients to monitor and reduce energy costs.
• Applied Angular and UX techniques to improve usability and responsiveness.

Finatec - Fundação de Empreendimentos Científicos e Tecnológicos, ***Frontend Software Developer***
May 2017 - Jan 2018
• Created a SPA with Angular for managing internal data for military administration, applying UX best practices for ease of use.

EDUCATION

Universidade de Brasília
Bachelor's degree • ***Computer Science*** • *2014 - 2022*

LICENSES & CERTIFICATIONS

Participant – Mini Company Program
Issued Jul 2012 - Expires Dec 2012

SKILLS

Angular Material • Continuous Integration and Continuous Delivery (CI/CD) • Jasmine Framework • Angular (Framework) • NgRx • Jest • Ionic • Tailwind CSS • React.js
